

E-commerce Operations Analysis

To: Stakeholders

From: Data Analyst

Subject: Q3 E-commerce Performance Review

Overview

This report details the current sales trajectory based on the E-commerce Dashboard. The data reflects a snapshot of market performance, focusing on profitability trends, territorial distribution, and category impact. Currently, the organization is seeing strong seasonal performance in specific months and a heavy reliance on a single geographic territory.

Product Revenue Contribution

The portfolio is evaluated based on unit pricing and volume across key categories:

- **Appliances & Furniture (Market Leaders):** With an average unit price of **867**, these categories represent the high-valuation segment of the digital catalog.
- **Skincare & Haircare (Growth Tier):** These categories contribute significantly to the volume, particularly during peak promotional periods.
- **Average Unit Price:** The overall average sum of unit price across the leading categories is currently **866.77**.

Regional Market Distribution

Geographic performance shows a high level of concentration in a single market:

- **North Region Dominance:** The North territory currently accounts for the vast majority of recorded sales, valued at **\$6.03K**.
- **Territorial Opportunity:** The South, West, and East regions are currently registering **0% activity** in this specific view, representing a significant opportunity for market expansion.

Sales Performance & Profitability

The dashboard tracks performance across the third quarter with a focus on

monthly trends:

- **Profitability Peak:** July was the most profitable month of the quarter, with profits exceeding **20K**.
- **Volume Surge:** August saw a major spike in the quantity of units sold (over **1,500**), likely driven by a slight increase in the total discount offered.
- **Market Share:** The current performance reflects a **1.84%** share of the total potential market in the active regions.

Strategic Recommendations

1. **Territory Balancing:** Launch an inquiry into the zero-activity regions (South, West, East) to determine if this is a reporting lag or a genuine lack of market penetration.
2. **Promotional Optimization:** Analyze the August strategy where high volume was achieved; determine if the discount levels used can be applied to the East and South regions to spark initial growth.
3. **Profitability Retention:** Investigate the specific product mix sold in July to develop a "Best Practices" framework to stabilize profits in the subsequent months of the year.
